

Sustainable Perspectives on Energy Security, Renewable Energy and Climate Change

22nd – 26th July 2013 | University of Azores, Ponta Delgada, Azores, Portugal

The University of Azores proudly announces its 4th Summer School with workshop sessions hosted in its campus of Ponta Delgada, Sao Miguel Island, Azores, Portugal

The summer school will address how **energy security** and **climate change** issues have been affecting various communities worldwide, particularly the coastal areas and island communities. It will investigate how local climate change effects are interrelated and the contributing factors to the vulnerability of certain locations. Further, it will explore possible mitigation and adaptation measures for these locations.

The vulnerability and possible means to strengthen **resilience of energy systems** to environmental impacts will be a relevant issue to be addressed in the summer school with a particular emphasis given to the **exploitation of renewable energy sources** and deployment of their related technologies.
